1 *Section Title*

Include the variable Foo portion of FooBar words in normal text.

1.1 Subsection Title

Text that is specific to the Foo version of the document.

```
1 <foo 1>≡  
  echo "Foo portion"  
  <common 2b>
```

Text that is common to both versions of the document.

```
2a <script 2a>≡
    echo "Say what this is doing..."
    if [ -x Foo ]; then # Foo specific section
        echo "This is Foo"
        foo
    else # Bar specific section
        echo "This is Bar"
        bar
    fi
```

```
2b <common 2b>≡
    echo "Common to both"
```

(? 1)

1.1.1 SubSubsection Title

A script for converting this document to PDF form and marking the output with a PRELIMINARY watermark follows:

```
2c <final 2c>≡
    lyx -e pdf $1
    lyx -e latex $1
```

```
2d <preliminary 2d>≡
    echo "Make $1 PDF release notes..."
    final $1.lyx
    pdftk $1.pdf stamp Preliminary.pdf output out.pdf
    rm $1.pdf
    mv out.pdf $1.pdf
```

```
2e <* 2e>≡
    echo "Extract script $2 from $1.lyx..."
    rm -f $1.nw
    lyx -e literate $1.lyx
    notangle -R$2 $1.nw > $2
    chmod a+x $2
```

Each of these scripts can be pulled out manually given the default * script defined above.
