LAPTOPS
\$100 EACH

I test; that I rated 12.3V
and created via a parallel combin
current type bulb used as a source of
Typical measured DC output for these
12 to 12.3 VDC, not a regulated 12VDC
or 2 that "failed" in general
ply "dead" -- not below 12VDC
I can find an AC power source at this
these on site, if I don't have portable
including detachable standard AC cord

\$6 each for 2-9. \$5 each for 10 or m

*I have at least
more of these (not)*
